

What is an Energy Audit?

An energy audit (or assessment) is a comprehensive evaluation of your home's healthy house and energy systems. The audit is done using state of the art diagnostic equipment including:

- **Combustion analyzers for testing your furnace, gas water heater, and gas stove.**
- **Blower door to establish areas of air infiltration and draftiness**
- **Infrared cameras to verify insulation effectiveness and identify moisture and by-pass issues**
- **Borescope for access to hidden areas**

Costs include a complete test-in and test-out evaluation.

Why do you need an Energy Audit?

Energy costs continue to rise year in and year out and it seems like all we can do is pay up. Maybe for some people this is ok and just something to accept and move on. For most of us though energy costs eat up any extra income we may have left over at the end of the month, and for some of us these costs effect our comfort, health, and well being. The truth is we can make a difference in how much we pay to meet our energy needs and in the process improve our comfort and health, the durability of our homes, and help save the planet at the same time.

Please accompany us during your audit. Our first goal is to help educate you about your home and what you can do to make it more comfortable, durable, and healthy, and save energy in the process. Saving energy means saving money.

The Report

The Report used by our Auditors was custom designed in house and covers every essential energy related system in detail.

Included in the Summary are captioned infrared photos of heat loss areas to help zero in on needed repairs. We will also include digital photos of areas needing attention such as pressure and thermal by-passes. In this way the latest in digital technology will help isolate areas needing attention.

Whenever possible, helpful web site addresses are included as well.

An attic by-pass

About Our Auditors

Both of our Assessors are certified by The Building Performance Institute (BPI) www.bpi.org and are recognized by the EPA's Energy Star program. www.energystar.gov.

What exactly does this mean? It means that we've spent time undergoing extensive field and class room training and have successfully completed both written and field examinations. It means that our testing protocols are established and recognized nationally. It means that our testing equipment is state of the art and it means that we know how to use them. It also means that our recommendations are based on hard statistics and not on opinions.

The report that you will receive is both comprehensive and clearly presented.

Our primary service area is northwestern Ohio and Southeastern Michigan but we are available to travel anywhere we can help make a difference.

Your first and best environmental dollar would be spent to conserve energy in your own home. To find out more about Energy Performance Partners, LLC check out our web site at:

www.energyperformancepartners.com

or Email us at:

info@energyperformancepartners.com

We'll be glad to answer any of your questions.

All audits are performed to the standards of the Building Performance Institute (BPI) and both of our inspectors are certified Building Analysts.
